### PRELIMINARY ESTIMATE OF GROSS INDIGENOUS PRODUCTION 1994

and cattle population in may/june 1993

#### Slight increase in gross indigenous production in 1994

Gross indigenous production for 1994 is expected to increase by 0.4% or 104 000 head over 1993. However, the figures are more unreliable than usual since the available external trade figures, which are required in addition to the population returns, were incomplete owing to the

change in the recording of data on intra-trade.

For the Community as a whole, a gross indigenous production of 29.306 million head is expected. Production for the first six months will remain 0.9% down on 1993, whilst an increase of 1.6% can be expected during the second half of the year. Production will increase sharply in the United Kingdom at +8.0%. In Belgium, production will increase by +2.3% and in Germany by +0.9%. In Greece and Italy, production will remain at around the 1993 level. In all the other Member States, gross indigenous production will fall. Spain will be hardest hit, with a fall of -4.5%, followed by Denmark (-4.2%) and Ireland (-2.7%). In the Netherlands, production is expected to fall by -1.0% and in France by -0.7%.

### light recovery in cattle numbers compared with December 1992...

There has been the normal seasonal slight recovery in the European Community's cattle population since the last census, which was held in December 1992. This emerged from an analysis of the survey carried out by Member States in May/June of this year. There are now 81.362 million head of cattle in the Community.

### ... but still down on last year

Although cattle numbers are +2.5% up on the December survey, they are still a good 1.7% or 1.428 million head lower than a year ago. Trends varied from one Member State to the next. The sharpest fall was in Germany, at -3.7%, followed by Italy (-3.6%) and Portugal (-3.2%). In Greece, numbers fell by 2.9%, in the Netherlands and Denmark by 2.6%, and in France by 1.5%. There were slight falls in Spain and Luxembourg at -0.7% and -0.1% respectively. By contrast, Belgium, Ireland and the United Kingdom recorded slight increases of +1.1%, +0.7% and +0.1% respectively.

### Further fall in dairy cattle population

The numbers of dairy cattle in the European Community continued to fall. With the exception of Greece, where dairy cattle numbers rose by 1.5%, all Member States were affected by this negative trend to a greater or lesser extent. In percentage terms, the sharpest fall was in Belgium, at -8.7%. Italy was in second place at -5.2%, followed by Spain (-4.7%), France (-3.4%) and Portugal (-3.1%). Germany recorded a fall of -2.9%, Luxembourg -1.9% and the Netherlands -1.8%. The figures for Ireland and the United Kingdom were approximately the same as in May/June 1992 at -0.5% and -0.1% respectively. 3,1%). Germany recorded a fall of -2.9%, Luxembourg -1.9% and the Netherlands -1.8%. The figures for Ireland and the United Kingdom were approximately the same as in May/June 1992 at -0.5% and -0.2% respectively.

### Substantial increase in "other cattle"

Virtually all Member States recorded substantial increases in the "other cattle" category. Germany headed the table at +36.1%, followed by Belgium (+31.4%) and the Netherlands (+16.1%). Ireland recorded an increase of +10.5%, Italy +8.7%, Spain +8.0% and Luxembourg +6.5%. Although France recorded a growth of just +4.8% in percentage terms, its increase of 187 000 head was greatest in absolute terms, as numbers were very high to begin with. In Portugal, numbers increased by +4.8% and in the United Kingdom by +3.7%. Only Denmark and Greece recorded falls in the numbers of "other cattle", at -1.8% and -7.4% respectively.

### Further fall in cattle numbers in the new German Länder?

There was a further attenuation in the downward trend in the new German Länder: although the cattle population fell by a further 245 000 head (or -8.1%) compared with May/June 1992, the decline compared with the December 1992 survey was just 56 000.

The number of cows, which is important for future population trends, actually increased slightly over December, by 14 000 head or 1.2%.

The cattle population of the former GDR is now 2.775 million, or 17% of Germany's total. 83% of all cattle are thus in the old German Länder. For dairy cattle, the ratio is slightly better at 1:5.
